

WATER MAGNETISER

DIMENSIONS

Height:	116mm
Diameter:	60mm
Circumference	160mm

The Ecocamel Water Magnetiser uses powerful magnets that changes the bonding angle between the hydrogen and the oxygen atoms in the water molecule. This causes the water molecules to cluster together in small groups leading to better absorption of water into the root system, dramatically improving the plants hydration and nutrient levels. The magnetic fields also changes the shape, solidarity and polarity of limescale compounds and mineral particles that prevents limescale sticking to garden pipes, sprinkler systems and water hoses.

GROW BIGGER PLANTS & HEALTHIER FRUITS & VEGETABLES

Fitting Information

Simply take it out of the box, slide it apart, put one half at the back of your water pipe or hose pipe and slide the top half back onto it. And then just leave it to do its work. No screws, no electricity just simple thunderstorm rainfall style magnetised water for gardens, allotments, ponds and irrigation systems.

There is no maintenance - just fit and forget.

To fit the Water Magnetiser your inlet pipe would need to be an inch minimum away from the wall. The Water Magnetiser slides into place so that it can be fitted in a confined space. You would however need about four or five inches of free pipe above or below where you intend to place it in order to slide the two halves together.

** NB. Do not handle the magnets if your are on a heart pacemaker or similar as the magnets are very powerful. If you wear a quartz watch or have credit cards nearby remove them before handling the magnets as the magnets will stop your watch and wipe your credit cards clean.
